Battery Meter

The trolley includes an on-screen battery meter in the top right corner (fig. 1) which provides an indication of remaining battery capacity.

The battery bar is green when fully-charged. The bar will gradually reduce while turning amber and then red as battery capacity decreases.

The trolley also features a more detailed Battery Status, which can be accessed by tapping the Battery icon from the Home screen or within GPS Mode. This displays the battery capacity including a percentage remaining (fig. 2).

Battery Voltage Setting

The trolley is supplied with a battery featuring a Blue/Black charging socket. The battery indicator has been calibrated for this type of battery. This trolley is also compatible with batteries featuring a Grey/Black charging socket. If you are using this type of battery, the battery indicator will need to be recalibrated:

1. From the Home screen, select the Settings icon and then "Battery Settings"
2. If you are using a battery with a Blue/Black charging port, select 26V
3. If you are using a battery with a Grey/Black charging port, select 28V (fig. 3)
4. Press the back arrow to save your desired settings
